

# THE EPWORTH SLEEPINESS SCALE

How likely are you to doze off or fall asleep in the following situations, in contrast to feeling just tired? This refers to your usual way of life in recent times. Even if you have not done some of these things recently try to work out how they would have affected you. Use the following scale to choose the most appropriate number for each situation.

|                                      |
|--------------------------------------|
| <b>0 = no chance of dozing</b>       |
| <b>1 = slight chance of dozing</b>   |
| <b>2 = moderate chance of dozing</b> |
| <b>3 = high chance of dozing</b>     |

| SITUATION  | CHANCE OF DOZING |
|--|------------------|
| Sitting and reading  |                  |
| Watching TV  |                  |
| Sitting inactive in a public place(e.g. a theater or a meeting)      |                  |
| As a passenger in a car for an hour without a break                  |                  |
| Lying down to rest in the afternoon when circumstances permit        |                  |
| Sitting and talking to someone                                       |                  |
| Sitting quietly after a lunch with out alcohol                       |                  |
| In a car, while stopped for a few minutes in traffic                 |                  |
| <b>TOTAL SCORE</b><br>(add the scores up) this is your Epworth score |                  |

If your score is above 10 you should talk to your physician about common sleeping disorders. Such as sleep apnea, snoring, periodic leg or limb movements and narcolepsy.
