

# RIVERVIEW REHABILITATION CENTER

## OUTCOMES REPORT

2013

Riverview Rehabilitation Center (RRC) has been successful in maximizing the functional status of our patients as measured by the key indicator LOS efficiency which compares the functional improvement made during the inpatient rehab stay with the length of stay required to make the gains.

The data below suggests that Riverview Rehabilitation Center returns patients to a higher level of function in a shorter period of time than both the region and the nation.

RRC has an outstanding team of clinicians and physicians who work together to ensure that our patients are provided with aggressive inpatient therapy as soon as possible following an acute functional decline. The data below shows that RRC outperforms the region and the nation in this area.
