Skin cancer is the most commonly diagnosed cancer in the United States, yet most cases are preventable. Most conditions are caused by unnecessary ultraviolet (UV) radiation exposure, from excessive time in the sun or from the use of indoor tanning devices. While those with lighter skin are more susceptible, anyone can get skin cancer—and it can be serious, even deadly.

Please be our guest for a complimentary lunch and to hear from Hackensack Meridian Health experts on skin cancer detection, risk factors, and the treatment options available at Riverview Medical Center.

Featured Speakers

Stephanie Mitsos, M.D.
Internal Medicine

Peter Hetzler, M.D.
Plastic Surgery

Adnan Danish, M.D.
Radiation Oncology
